**Résumé / Abstract:**

The next upgrade to the ocean wave model WAM will be implemented on the new IBM Power 7 machine in 2012 and will be replacing the current 4: 5 version that has been in operation since 2006. The new version includes a number of changes including new or modified grid domains, improved model physics, coding improvements and added run-cycles. The presentation will provide a summary of these changes along with highlights of the objective verification results generated during the past two years.
