Sujet/Subject: Satellite Soil Moisture Remote Sensing for Climate-Related Risk Monitoring at Agriculture Canada

Langue/language : Anglais/English

Conférencier/Lecturer: Catherine Champagne (Agriculture Canada)

Résumé/Abstract:

Agriculture and Agri-food Canada (AAFC) operates a climate-related production risk monitoring system that uses a number of satellite, modelled and in situ based indicators of climate conditions related to crop production. Catherine will discuss how satellite soil moisture supports this broader monitoring framework and future data integration activities at AAFC.
