Atmosphere-land-ocean-cryosphere interactions – Interactions atmosphère-terre-océan-cryosphère		#
Annelize van Niekerk	Quantifying the uncertainty in parametrized orographic drag and its impact on the large scale atmospheric circulation	62
Asmerom Beraki	Seasonal to inter-annual climate variability as simulated by the Variable-Resolution Earth System Model	66
Daria Gushchina	The relationship between intraseasonal tropical variability and ENSO in CMIP5.	70
Emilia Sanchez Gomez	Role of the remote and local wind stress forcing in the development of the warm SST errors in the South-Eastern Tropical Atlantic in a coupled high-resolution seasonal hindcast	74
Eunjeong Lee	Impacts of Sea Surface Salinity on Numerical Weather Prediction	78
Fatoumata Binta Diallo	Using in-situ observations to identify sources of surface energy biases in climate models : focus on West Africa	82
Felix Pithan	Larcform1: A process-based evaluation of model biases in the Arctic boundary layer	57
Felix Pithan	Missing orographic drag leads to climate model biases in jet streams, blocking and storm tracks	58
Gunilla Svensson	Impact of boundary layer wind turning on the general circulation	86
Hal Ritchie	Overview of CONCEPTS Ice-Ocean Prediction Systems: From Research to Operations	90
Huang-Hsiung Hsu	Improving Madden-Julian Oscillation Simulation: Atmosphere-Ocean Coupling and Land/Orographic Effect	94
Hyeyum Hailey Shin	Diurnal Cycle Climatology of Planetary Boundary Layer Parameters in the Atmospheric Component of the GFDL Global Climate Model	98
Inna Polichtchouk	Zonal-mean circulation response to reduced air-sea momentum roughness	102
Irina Sandu	Orographic drag uncertainties impact forecast skill	106
Keith Williams	Atmospheric model surface heat flux errors responsible for long-standing Southern Ocean climate model biases	54
Kwinten Van Weverberg	Near-surface temperature biases in weather and climate models near the Southern Great Plains	110
Nils Wedi	High resolution forecast error with reduced precision	114
Patrick Broxton	How are CFS seasonal forecasts affected by poor snow initialization?	118
Rostislav Fadeev	Coupled atmosphere-ocean model SLAV-INMIO: implementation and first results of verification	122
Yihua Wu	Improving Near-Surface Field Forecasts in NCEP Forecast Models	126

WGNE-WSE 2017 - POSTERS - AFFICHES

Clouds and precipitation – Nuages et précipitation		#
Ángel Adames	Spatial and temporal variations in cloud-radiation feedbacks and gross moist stability in GFDL AM4 and ERA-Interim	25
Chein-Jung Shiu	Including cloud microphysics parameterization into cumulus parameterization of NCAR CESM and TaiESM	29
Danahé Paquin-Ricard	Role and Impact of a Deep Convective Parameterization on Km-Scale Atmospheric Forecasts	33
Guoqiang Xu	Preliminary Study of Superparameterization with GRAPES model and numerical experiments	37
Hideaki Kawai	Improvements and Reductions in Systematic Errors Associated with Clouds in the MRI Climate Model	41
Ian Folkins	Accurate simulation of the temperature profile in actively convecting regions of the tropics using a convective parameterization	45
Jason Milbrandt	Addressing Precipitation Displacement Errors due to Hydrometeor Drift	49
Jian Li	Improvement of rainfall simulation on the steep edge of the Tibetan Plateau	5
Jian Li	Comparing CAM5 and Superparameterized CAM5 Simulations of Summer Precipitation Characteristics over Continental East Asia: Mean State, Frequency–Intensity Relationship, Diurnal Cycle, and Influencing Factors	6
Jon Petch	Evaluating convective-scale simulations of tropical cyclones in South East Asia	61
Jorge Luis Gomes	1-Km Eta Model Simulations over Complex Topography: Horizontal Diffusion and Cloud Microphysics Tests	65
Keith Williams	A multi-diagnostic approach to cloud evaluation	53
L. Ruby Leung	South Asian Monsoon Precipitation in CMIP5: Linking Biases and Inter-model spread to Model Representations of Tropical Convection	1
Martin Köhler	Uncertainty of summer convection over land using LES ensemble	69
Matthew Janiga	Prediction of Tropical Waves, the MJO, and Tropical Cyclones in Global Coupled Atmosphere-Ocean Forecasts	73
Ming Zhao	An analysis of global climate model simulated Madden Julian Oscillation with fully closed moist static energy budget	77
Mujtaba Hassan	Effect of model biases on simulated changes of South Asian Summer Monsoon precipitation under the AR5 scenarios	81
Nicholas Klingaman	Analyzing scales of precipitation in general circulation models and observations	85
Paul A. Vaillancourt	Improving the hydrological cycle, surface and top of atmosphere energy budgets of the Canadian global deterministic prediction system	89
Rae-Seol Park	Improvement of cloud fraction scheme via radiative budget analysis	93
Rafael Cesario de Abreu	Dynamical downscaling of precipitation in the South America: analysis of spectral nudging and the variability of the CMIP5 data	97
Richard Keane	Investigating the time scale of the Indian Monsoon dry bias in the Met Office Unified Model	16
Romain Roehrig	Disentangling atmospheric biases in the tropical Atlantic in the CNRM climate model	101
Shawn Corvec	A novel convective scheme for the CAM4 AGCM and impacts on the tropical circulation	105
Sin-Chan Chou	Evaluation of the Regional Climate Eta Model for long-term simulations over South America	109
Stan Benjamin	Common Cloud-Radiation Errors from 4-hour to 4-week Model Prediction	113
Steven Woolnough	Using the Weak Temperature Gradient Approximation to Develop and Evaluate Convective Parametrization Schemes	117
Tieh Yong Koh	Improved rainfall and cloud-radiation interaction with Betts-Miller-Janjic cumulus scheme in the tropics	121
William Ingram	Enhancing the vertical resolution of the latest MO GCM to 10 m through the boundary layer	19
Xianwen Jing	The too fast, too frequent precipitation simulated in GCMs	125
Yoo-Bin Yhang	Evaluation of Regional Climate Model for Trends of Extreme Indices over East Asia	129
Young Kwon	A scale-aware convective parameterization scheme	130

Metrics and diagnostics – Métriques et diagnostics		#
Amy Creese	Constraining Congo Basin rainfall in the CMIP5 ensemble: a process-based assessment	4
Barbara Casati	Verification of sea-ice prediction by using distance measures	7
Barbara Casati	A scale-separation verification approach which accounts for the uneven spatial density of station observation networks	8
Callum Munday	The representation of southern African rainfall in coupled climate models: the role of the Angola Low	32
Charlotte Demott	Sources of error for ocean feedbacks to the MJO	36
Daehyun Kim	MJO Simulation in CMIP5 Climate Models: MJO Skill Metrics and Process-oriented Diagnostics	40
Enrico Scoccimarro	Modeling Tropical Cyclone induced Power Dissipation Index: dependency on spatial and temporal resolution	48
Eric Maloney	Process-oriented Diagnostics in Climate Models: The Framework and Examples Based on the MJO	56
Etienne Tourigny	Process-based metrics developed in the framework of the PRIMAVERA project	60
Fabien Carminati	Characterisation of numerical weather prediction model biases using GRUAN reference radiosondes.	64
Glenn White	Assessing systematic errors in the Global Forecast System	68
H Annamalai	Systematic model errors in Asian-Australian monsoon precipitation climatology: process-based diagnostics to identify error sources	72
Jian Ling	A New Interpretation of the Ability of Simulating the MJO by Global Models	76
Jonathan Eliashiv	Tropical climate Variability in CESM-DART	80
Jose Antonio Salinas-Prieto	Dynamical regionalization evaluation for a tropical area	84
Keith Williams	The Cloud Feedback Model Intercomparison Project (CFMIP) Diagnostic Codes Catalogue	52
Kriti Bhargava	Estimation and Correction of GFS Systematic Errors Using Analysis Increments	88
Matthew Newman	Dynamically meaningful metrics of ENSO in climate models	92
Matthew Wheeler	Seamless precipitation prediction skill comparison between two global models	96
Michelle Harrold	Showcasing the hierarchical testing framework established by the Global Model Test Bed (GMTB)	100
Panos Athanasiadis	The representation of the North Atlantic eddy-driven jet variability and its sensitivity to model resolution.	104
Philip Pegion	Addressing errors in land surface initial conditions within the Global Forecast System Ensemble (GEFS)	24
Prince Xavier	MJO propagation and dependence on mean state in the Met Office Unified Model	108
Takafumi Kanehama	DPSIVS; an extensible and efficient verification system for Japan Meteorological Agency Global Spectral Model	112
Tara Jensen	Recent Advancements in Verification within the Developmental Testbed Center	116
Tido Semmler	A simple ocean model performance metrics applied to historical CMIP5 simulations	120
Tracey Dorian	Using Method for Object-Based Diagnostic Evaluation (MODE) to Analyze Systematic Biases in the Global Forecast System	124
William Ingram	Splitting the differences in climate sensitivities between models into components associated with differences in formulation or emergent feedback	20
Xianan Jiang	Process-oriented Diagnostic Metrics for the Madden-Julian Oscillation	128
Yumin Moon	Process Oriented Diagnostics of Tropical Cyclones in Climate Models	44
Zhuo Wang	Evaluation of the MJO and Tropical Cyclones in Global Models	27
